

Migration

```
classDiagram
    class Migration
    class Initial["Kyoo.Postgresql.Migrations.Initial"]
    Initial --|> Migration
```

The diagram shows a class hierarchy. At the top is a class box labeled 'Migration'. It has three horizontal compartments: the top one for the class name, and two empty ones for attributes and methods. Below it is a class box for 'Kyoo.Postgresql.Migrations.Initial'. This box has three compartments: the top one for the class name, an empty middle one, and a bottom one containing three method signatures: '# Up()', '# Down()', and '# BuildTargetModel()'. A blue arrow with an open triangular head points from the 'Initial' class box up to the 'Migration' class box, indicating that 'Initial' inherits from 'Migration'.

Kyoo.Postgresql.Migrations.  
Initial

# Up()  
# Down()  
# BuildTargetModel()
